2.Project Overview:

Calculating Family Expenses Using ServiceNow

Project Title

Importing & Securing Data In Servicenow

3.Abstract:

Managing family expenses can be challenging due to the complexity of tracking various expenditures. This project leverages ServiceNow to develop a solution for efficiently calculating and managing family expenses.

4.Problem Statement:

The difficulty lies in organizing and calculating family expenses accurately and efficiently. The goal is to create a system that can streamline this process.

5.Objective:

To design and implement a ServiceNow-based application for tracking and calculating family expenses.

6.Dataset Description:

- *Dataset*: Family Expense Records
- *Source*: Custom data entry through ServiceNow forms
- *Total Records*: [Number of Records]
- *Columns*: Date, Category, Amount, Description, etc.

7.Methodology:

1. *Data Collection*: Gather expense data through custom ServiceNow forms.
2. *Data Entry*: Input data into ServiceNow database.
3. *Data Analysis*: Use ServiceNow's reporting tools to analyze expenses.
4. *Visualization*: Create dashboards for visual representation of expenses.

8.Model Building:

- *Application*: ServiceNow Platform
- *Features*: Custom forms, data storage, and reporting tools
- *Implementation*: Configure ServiceNow to track and calculate expenses

9.Results & Accuracy:

- *Efficiency*: Improved tracking and calculation of family expenses
- *Accuracy*: Enhanced accuracy in expense management

10.Conclusion:

The developed ServiceNow application streamlines family expense management, making it easier to track and calculate expenditures. Future enhancements could include integration with bank accounts and automated expense categorization.
